- Circular Economy and Net-Zero

Carbon neutrality is achieved when the same amount of  $CO_2$  is emitted into the atmosphere as is removed by different routes, leaving a zero balance, also called a **zero carbon footprint.** 

On the road to Net-Zero is the only possible way to keep the planet's temperature increase below 1.5 °C.

**Objective:** Reducing greenhouse gas emissions to as close to zero as possible.

In the absence of effective global governance, companies are voluntarily adopting climate neutrality strategies aligned with climate science, including the transitional use of Voluntary Carbon Markets.

- Reduce emissions within the value chain through technology in line with the 1.5°C trajectory.
- Achieve net zero emissions by 2050.
- Finance emission reductions and emissions outside the value chain through Voluntary Carbon Markets (beyond value chain mitigation, offsetting).
- Neutralize residual emissions through carbon sinks (removals).

Europe aims to be a carbon neutral continent by 2050.

Targets: 55% emissions reduction by 2030 Net-Zero emissions by 2050

Spain aims to achieve climate neutrality by 2050, and to have an electricity system based exclusively on renewable generation.

Targets: 23% emissions reduction by 2030 Net-Zero emissions by 2050

UK requires listed companies to disclose their decarbonization and transition plans to Net-Zero 2023.

Obligation to publish its GHG reduction targets (Scopes 1, 2 and 3), the steps to achieve these targets and the main milestones towards neutrality by 2050. External verification.

New EU CSR Directive requires inscope companies\* to publish climate action information aligned to Net-Zero.

Obligation to disclose emission reduction targets aligned with Net Zero, plans for reduction measures and budget allocated to each measure, offsetting and neutralization actions.

## Companies and Net-Zero

Companies (investors, funders, customers, consumers, employees, society) are expected to commit to becoming Net-Zero by 2050.

Economic	Environmental Geopolitical	Societal Technological	
		% of respondents	
	Extreme weather	31.1%	
0–2 years	Livelihood crises	30.4%	
	Climate action failure	27.5%	
	Social cohesion erosion	27.5%	
	Infectious diseases	26.4%	
	Mental health deterioration	26.1%	
	Cybersecurity failure	19.5%	
	Debt crises	19.3%	
	Digital inequality	18.2%	
	Asset bubble burst	14.2%	8
2–5 years	Climate action failure	35.7%	
	Extreme weather	34.6%	
	Social cohesion erosion	23.0%	
	Livelihood crises	20.1%	
	Debt crises	19.0%	
	Human environmental damage	16.4%	
	Geoeconomic confrontations	14.8%	
	Cybersecurity failure	14.6%	
	Biodiversity loss	13.5%	
	Asset bubble burst	12.7%	
	Climate action failure	42.1%	
5–10 years	Extreme weather	32.4%	
	Biodiversity loss	27.0%	
	Natural resource crises	23.0%	
	Human environmental damage	21.7%	
	Social cohesion erosion	19.1%	
	Involuntary migration	15.0%	
	Adverse tech advances	14.9%	
	Geoeconomic confrontations	14.1%	
	Geopolitical resource contestation	13.5%	

Climate Change

BlackRock expects 75% of company and govt assets to be net zero-aligned by 2030

SSGA Targets Decarbonization Across Portfolios

## COMPLETING THE PICTURE: TACKLING THE OVERLOOKED EMISSIONS

Efforts to combat climate change have focused primarily on addressing 55% of global GHG emissions through:

- Transitioning to renewable energy
- Energy efficiency measures
